

Albion's Pathway to Scientifically Proven Mineral Amino Acid Chelates

Albion Advanced Nutrition, the global leader in nutritional technology, has developed a patented Proof of Chelation process – using fast-fourier transforming infrared spectroscopy (FT-IR), it tracks the identity of the bonding of compounds being tested and provides a unique fingerprint readout of each molecule. Albion's AOAC validated Proof of Chelation quantifies the integrity and, in turn, the effectiveness of Albion's patented, pharmaceutical grade mineral amino acid chelates on human nutrition.

The result? The Real Amino Acid Chelate System, or TRAACS™, Albion's Gold Medallion™ dietary supplements that are:

- **Highly bioavailable throughout the digestion process**
- **Safe, predictable and effective**
- **Stable in acidic environments**
- **Hypoallergenic, Kosher-Pareve and vegetarian friendly**

With more than a half century of clinical and field testing and over 75 patents to our name, Albion TRAACS effective nutritional support with landmark discoveries in mineral chelation.

For optimal nutritional support, make TRAACS with Albion. Because no other chelates can follow in Albion's TRAACS.
